How to Fly a Horse-Kevin Ashton 2015-01-20 As a technology pioneer at MIT and as the leader of three successful start-ups, Kevin Ashton experienced firsthand the all-consuming challenge of creating something new. Now, in a tour-de-force narrative twenty years in the making, Ashton leads us on a journey through humanity's greatest creations to uncover the surprising truth behind who creates and how they do it. From the crystallographer's laboratory where the secrets of DNA were first revealed by a long forgotten woman, to the electromagnetic chamber where the stealth bomber was born on a twenty-five-cent bet, to the Ohio bicycle shop where the Wright brothers set out to "fly a horse," Ashton showcases the seemingly unremarkable individuals, gradual steps, multiple failures, and countless ordinary and usually uncredited acts that lead to our most astounding breakthroughs. Creators, he shows, apply in particular ways the everyday, ordinary thinking of which we are all capable, taking thousands of small steps and working in an endless loop of problem and solution. He examines why innovators meet resistance and how they overcome it, why most organizations stifle creative people, and how the most creative organizations work. Drawing on examples from art, science, business, and invention, from Mozart to the Muppets, Archimedes to Apple, Kandinsky to a can of Coke, How to Fly a Horse is a passionate and immensely rewarding exploration of how "new" comes to be.

Education in the Creative Economy-Daniel Araya 2010 Education in the Creative Economy explores the need for new forms of learning and education that are most conducive to supporting student development in a creative society. Just as the assembly line shifted the key factor of production from labor to capital, digital networks are now shifting the key factor of production from capital to innovation. Beyond conventional discussions on the knowledge economy, many scholars now suggest that digital technologies are fomenting a shift in advanced economies from mass production to cultural innovation. This edited volume, which includes contributions from renowned scholars like Richard Florida, Charles Landry, and John Howkins, is a key resource for policymakers, researchers, teachers and journalists to assist them to better understand the contours of the creative economy and consider effective strategies for linking education to creative practice. In addition to arguments for investing in the knowledge economy through STEM disciplines (science, technology, engineering and math), this collection explores the growing importance of art, design and digital media as vehicles for creativity and innovation.

Do Museums Still Need Objects?-Steven Conn 2010 "We live in a museum age," writes Steven Conn in Do Museums Still Need Objects? And indeed, at the turn of the twenty-first century, more people are visiting museums than ever before. There are now over 17,500 accredited museums in the United States, averaging approximately 865 million visits a year, more than two million visits a day. New museums have proliferated across the cultural landscape even as older ones have undergone transformational additions: from the Museum of Modern Art and the Morgan in New York to the High in Atlanta and the Getty in Los Angeles. If the golden age of museum-building came a century ago, when the Metropolitan Museum of Art, the American Museum of Natural History, the Philadelphia Museum of Art, the Field Museum of Natural History, and others were created, then it is fair to say that in the last generation we have witnessed a second golden age. By closely observing the cultural, intellectual, and political roles that museums play in contemporary society, while also delving deeply into their institutional histories, historian Steven Conn demonstrates that museums are no longer seen simply as houses for collections of objects. Conn ranges across a wide variety of museum types—from art and anthropology to science and commercial museums—asking questions about the relationship between museums and knowledge, about the connection between culture and politics, about the role of museums in representing non-Western societies, and about public institutions and the changing nature of their constituencies. Elegantly written and deeply researched, Do Museums Still Need Objects? is essential reading for historians, museum professionals, and those who love to visit museums.

Technology and Politics-Michael E. Kraft 1988 An examination of the relationship between pervasive technology and politics. A philosophical viewpoint upon such questions as: who shall benefit from development, which risks are acceptable, and who shall decide? A cloth edition (0-8223-0846-0) at $59.75 has not been seen. Mental Health Services for Vulnerable Children and Young People-Michael Tarren-Sweeney 2013-09-11 More than half of children either in foster care, or adopted from care in the developed world, have a measurable need for mental health services, while up to one quarter present with complex and severe trauma- and attachment-related psychological disorders. This book outlines how services can effectively detect, prevent, and treat mental health difficulties in this vulnerable population. Responding to increasing evidence that standard child and adolescent mental health services are poorly matched to the mental health service needs of children and young people who have been in foster care, this book provides expert guidance on the design of specialised services. The first part provides an overview of these children's mental health needs, their use of mental health services and what is known about the effectiveness of mental health interventions provided to them. The second part presents some recent innovations in mental health service delivery, concentrating on advances in clinical and developmental assessment and treatment. The final part confronts the challenges for delivering effective mental health services in this area. This is the definitive international reference for the design of specialised mental health services for children and young people in care and those adopted from care. It is invaluable reading for health and social care professionals working with this population and academics with an interest in child and adolescent mental health from a range of disciplines, including social work, nursing and psychology.

Out of Italy-Fernand Braudel 2019-07-16 From the author of Memory and the Mediterranean, a comprehensive history of the Italian city states from 1450 to 1650. In the fifteenth century, even before the city states of the Apennine Peninsula began to coalesce into what would become, several centuries later, a nation, "Italy" exerted enormous influence over all of Europe and throughout the Mediterranean. Its cultural, economic, and political dominance is utterly astonishing and unique in world history. Viewing the Italy?the many Italies?of that time through the lens of today allows us to gather a fragmented, multi-faceted, and seemingly contradictory history into a single unifying narrative that speaks to our current reality as much as it does to a specific historical period. This is what the acclaimed French historian, Fernand Braudel, achieves here. He brings to life the two extraordinary centuries that span the Renaissance, Mannerism, and the Baroque and analyzes the complex interaction between art, science, politics, and commerce during Italy's extraordinary cultural flowering.

2009 Information and Communications for Development-World Bank 2009-01-01 Over the last decade, information and communication technologies (ICT) have been increasingly used to achieve development goals. Developing countries, including poorer ones, have enjoyed rapid technological progress to help pull millions of people out of poverty. ICTs help transform economic and social activities for firms, governments, and citizens.

Information and Communication for Development 2009: Scaling Up Impact, the second issue of the World Bank's IC4D series, focuses on the effect of increased access to advanced ICT services and development of a vibrant IT sector on sustaining growth.

EW 102-David Adamy 2004 Serving as a continuation of the bestselling book EW 101: A First Course in Electronic Warfare, this new volume is a second book based on the popular tutorials featured in the Journal of Electronic Defense. Without delving into complex mathematics, this book lets you understand important concepts central to EW, so you gain a basic working knowledge of the technologies and techniques deployed in today's EW systems.

Communities in Cyberspace-Peter Kollock 2002-06-01 This wide-ranging introductory text looks at the virtual community of cyberspace and analyses its relationship to real communities lived out in today's societies. Issues such as race, gender, power, economics and ethics in cyberspace are grouped under four main sections and discussed by leading experts: * identity * social order and control * community structure and dynamics * collective action. This topical new book displays how the idea of community is being challenged and rewritten by the increasing power and range of cyberspace. As new societies and relationships are formed in this virtual landscape, we now have to consider the potential consequences this may have on our own community and societies. Clearly and concisely written with a wide range of international examples, this edited volume is an essential introduction to the sociology of the internet. It will appeal to students and professionals, and to those concerned about the changing relationships between information technology and a society which is fast becoming divided between those on-line and those not.

How to Accelerate Your Internet-Rob Flickenger 2006-10-01

Privacy, Big Data, and the Public Good-Julia Lane 2014-06-09 Massive amounts of data on human beings can now be analyzed. Pragmatic purposes abound, including selling goods and services, winning political campaigns, and identifying possible terrorists. Yet 'big data' can also be harnessed to serve the public good: scientists can use big data to do research that improves the lives of human beings, improves government services, and reduces taxpayer costs. In order to achieve this goal, researchers must have access to this data - raising important privacy questions. What are the ethical and legal requirements? What are the rules of engagement? What are the best ways to provide access while also protecting confidentiality? Are there reasonable mechanisms to compensate citizens for privacy loss? The goal of this book is to answer some of these questions. The book's authors paint an intellectual landscape that includes legal, economic, and statistical frameworks. The authors also identify new practical approaches that simultaneously maximize the utility of data access while minimizing information risk.

Heaven to Hell-David LaChapelle 2010 Sumptuously packaged in the trilogy's boxed hardcover format, LaChapelle's 'Heaven to Hell' is a must-have for anyone interested in contemporary photography. It is an explosive compilation of new work by the visionary photographer.

The Smart Enough City-Ben Green 2020-02-18 Smart cities, where technology is used to solve every problem, are hailed as futuristic urban Utopias. But in The Smart Enough City, Ben Green warns against seeing the city only through the lens of technology. In a technology-centric smart city, self-driving cars have the run of downtown and force out pedestrians, civic engagement is limited to requesting services through an app, police use algorithms to justify and perpetuate racist practices, and governments and private companies surveil public space to control behavior. He proposes instead that cities strive to be "smart enough," employing technology to be livable, democratic, just, responsible, and innovative. By recognizing the complexity of urban life rather than merely seeing the city as something to optimize, these smart enough cities successfully incorporate technology into a holistic vision of justice and equity. International Summit on the Teaching Profession Schools for 21st-Century Learners Strong Leaders, Confident Teachers, Innovative Approaches-Schleicher Andreas 2015-03-12 This report summarises evidence from the OECD TALIS and PISA surveys that underpins the three themes of the 2015 International Summit on the Teaching Profession: school leadership, teachers' self-efficacy and innovation.

The Law and Policy of Annexation-Carman Fitz Randolph 1901

Reclaiming our Roman Catholic Birthright-Peter Kwasniewski 2020-05-23 At the crest of volatile years of experimentation, a new rite of Mass was introduced in 1969—no mere cosmetic treatment but a radical reconstruction of the Church's central act of worship. A minority of the faithful continued to hold fast to the traditional rite, which John Paul II and Benedict XVI gradually freed from restrictions. The steady growth of this "traditionalist" movement inevitably prompts questions in the minds of more and more people. What is it that Catholic laity, clergy, and religious are discovering and falling in love with? Could you—should you—be among them? In this engaging book, Peter Kwasniewski draws on decades of experience and, presuming no specialized knowledge, explains why the traditional Mass operates the way it does, what its distinctive features and benefits are, and how it still captures hearts with a beauty deeply rooted and perennially green. Every reader—whether already a lover of the Mass of Ages or a complete newbie, whether committed or curious, perplexed or skeptical, sitting on the fence or bouncing back and forth between old and new—will find life-changing insights in these pages.

Principles of Digital Communication-Robert G. Gallager 2008-02-28 The renowned communications theorist Robert Gallager brings his lucid writing style to the study of the fundamental system aspects of digital communication for a one-semester course for graduate students. With the clarity and insight that have characterized his teaching and earlier textbooks, he develops a simple framework and then combines this with careful proofs to help the reader understand modern systems and simplified models in an intuitive yet precise way. A strong narrative and links between theory and practice reinforce this concise, practical presentation. The book begins with data compression for arbitrary sources. Gallager then describes how to modulate the resulting binary data for transmission over wires, cables, optical fibers, and wireless channels. Analysis and intuitive interpretations are developed for channel noise models, followed by coverage of the principles of detection, coding, and decoding. The various concepts covered are brought together in a description of wireless communication, using CDMA as a case study.

The State of the Middle East Atlas-Dan Smith 2015-10-15 The author of the best-selling State of the World Atlas builds a unique contemporary understanding of the factors and forces at play by homing in on the key events, themes, resources and relationships. Blending the creative use of maps and graphics with incisive text and the most-up-to-date statistics, this Atlas explains the background to current events in the Middle East.

China As an Innovation Nation-William Lazonick 2016-02-04 This volume assesses China's transition to innovation-nation status in terms of social conditions, industry characteristics and economic impacts over the past three decades, also providing insights into future developments. Defining innovation as the process that generates a higher quality, lower cost product than was previously available, the introductory chapter conceptualizes the theory of an innovation nation and the lessons from Japan and Untied States. It outlines the key governance, employment and investment institutions that China must build for such transition to occur, and examines China's challenges and strategies to innovate in the era of global production systems. Two succeeding chapters explain the evolving roles of Chinese state in innovation, and the new landscape of venture capital finance. The remaining

chapters provide studies of major industries, which contain analyses of the evolving roles of investment by government agencies and business interests in the process. Included in these studies are traditional industries such as mechanical engineering, railroads, and automobiles; rapidly evolving and internationally highly integrated industries such as information-and-communication-technology (ICT); and newly emerging sectors such as wind and solar energy. Written by leading academics in the field, studies in this volume reveal Chinese innovation as diverse across industries and enterprises and fluid over time. In each sector, we observe continued co-evolution of state policy, market demand, and technology development. The strategies and structures of individual companies and industrial ecosystems are changing rapidly. The sum total of the studies is a great step forward in our understanding of the industrial foundations of China's attempt to become an innovation nation.

ERDAS Field Guide- 2002 This book is designed for a widely diverse audience, from those new to geoprocessing to veteran industry users. For newcomers, the Guide "provides a brief history of the field, an extensive glossary of terms, and notes about applications for the different processes described." For more experienced users, the Guide "includes the formulas and algorithms that are used in the code," so that exactly how each operation works can be readily seen. -- from Introduction.

Wireless Networking in the Developing World-Rob Flickenger 2009-09-24 Provides instructions on how to build low-cost telecommunications infrastructure. Topics covered range from basic radio physics and network design to equipment and troubleshooting, a chapter on Voice over IP (VoIP), and a selection of four case studies from networks deployed in Latin America. The text was written and reviewed by a team of experts in the field of long distance wireless networking in urban, rural, and remote areas. Contents: 1) Where to Begin. 2) A Practical Introduction to Radio Physics. 3) Network Design. 4) Antennas & Transmission Lines. 5) Networking Hardware. 6) Security & Monitoring. 7) Solar Power. 8) Building an Outdoor Node. 9) Troubleshooting. 10) Economic Sustainability. 11) Case Studies. See the website for translations, including French, Spanish, Portuguese, Italian, Arabic, and others, and additional case studies, training course material, and related information

The Entrepreneurial State-Mariana Mazzucato 2015-11-15 Named one of the best books of 2013 by the 'Financial Times', 'Huffington Post' and 'Forbes', this debate-shifting book debunks the myth of the State as a static bureaucratic organization only needed to 'fix' market failures, leaving dynamic entrepreneurship and innovation to the private sector. Case studies ranging from the innovations that make the iPhone so 'smart' to the current developments in clean technology reveal the reality, whereby the private sector only invests after the entrepreneurial State has made the bold, high-risk investments.

Life's Little Deconstruction Book-Andrew Boyd 1998-11 Like postmodernism itself, this tiny manual is a work of inspired piracy, melding cutting-edge cultural theory with the corporate and computer lingos that permeate our lives.

Personal Mobilities-Aharon Kellerman 2006-11-22 Personal Mobilities provides a systematic study of personal movement focusing on the dimensions of space, individuals, societies and technologies. Kellerman examines a variety of personal mobilities, including air transportation, through several perspectives, examining the human need for movement, their anchoring within wider societal trends, commonalities and differences among mobility technologies and international differences. Although spatial mobility seems geographical by its very nature, the topic has been so far treated only partially, and mainly by sociologists. Personal Mobilities highlights geographical as well as sociological aspects and is the first book to focus solely on personal mobilities.

The Myths of Innovation-Scott Berkun 2010-08-13 In this new paperback edition of the classic bestseller, you'll be taken on a hilarious, fast-paced ride through the history of ideas. Author Scott Berkun will show you how to transcend the false stories that many business experts, scientists, and much of pop culture foolishly use to guide their thinking about how ideas change the world. With four new chapters on putting the ideas in the book to work, updated references and over 50 corrections and improvements, now is the time to get past the myths, and change the world. You'll have fun while you learn: Where ideas come from The true history of history Why most people don't like ideas How great managers make ideas thrive The importance of problem finding The simple plan (new for paperback) Since its initial publication, this classic bestseller has been discussed on NPR, MSNBC, CNBC, and at Yale University, MIT, Carnegie Mellon University, Microsoft, Apple, Intel, Google, Amazon.com, and other major media, corporations, and universities around the world. It has changed the way thousands of leaders and creators understand the world. Now in an updated and expanded paperback edition, it's a fantastic time to explore or rediscover this powerful view of the world of ideas. "Sets us free to try and change the world."--Guy Kawasaki, Author of Art of The Start "Small, simple, powerful: an innovative book about innovation."--Don Norman, author of Design of Everyday Things "Insightful, inspiring, evocative, and just plain fun to read. It's totally great."--John Seely Brown, Former Director, Xerox Palo Alto Research Center (PARC) "Methodically and entertainingly dismantling the cliches that surround the process of innovation."--Scott Rosenberg, author of Dreaming in Code; cofounder of Salon.com "Will inspire you to come up with breakthrough ideas of your own."--Alan Cooper, Father of Visual Basic and author of The Inmates are Running the Asylum "Brimming with insights and historical examples, Berkun's book not only debunks widely held myths about innovation, it also points the ways toward making your new ideas stick."--Tom Kelley, GM, IDEO; author of The Ten Faces of Innovation

How We Think They Think-Maurice E F Bloch 2018-02-02 "Maurice Bloch is so ferociously smart that one can always enjoy tangling with his ideas, even when—perhaps especially when—one doesn't agree with him. This is an important and provocative book." —Sherry Ortner Columbia University These essays by one of anthropology's most original theorists consider such fundamental questions as: Is cognition language-based? How reliable a guide to memory are people's narratives about themselves? What connects the "social recalling" studied by anthropologists to the "autobiographical memory" studied by psychologists? Now gathered in accessible form for the first time and drawing frequently upon the author's fieldwork among the Zafimaniry of Madagascar for ethnographic examples, the twelve closely linked essays of How We Think They Think pose provocative challenges not only to conventional cognitive models but to the basic assumptions that underlie much of ethnography. This book will be read with interest by those who study culture and cognition, ethnographic theory and practice, and the peoples and cultures of Africa.

The Economics of QWERTY-S. J. Liebowitz 2002-02 The top left hand side of the keyboard reads "Q-W-E-R-T-Y." Is this inefficient layout an inefficient early development to which we are now forever committed? The "economics of QWERTY" describes cases in which it has been claimed that technologies which have become accepted are not as good as rival technologies. Perhaps they have been "locked in" at an early stage, preventing newer, better possibilities from taking hold. Distinguished economists Stan Liebowitz and Steven Margolis have critically examined the various aspects of the economics of QWERTY and its implications, calling into question the historical accuracy of the standard account of QWERTY and similar cases such as those of Beta/VHS and Macintosh/Windows. They contend that no plausible case of inferior standards being locked in has ever been documented, though much antitrust activity and legislative policy has been based on the belief in the occurrence of such cases. The Economics of Qwerty brings together into one volume Liebowitz and Margolis's essential contributions, remarkable for their eloquence and relevance, to consider these issues, which are of real and enduring importance for the functioning of the market economy. Together they constitute a complete account of the critique of the economics of QWERTY.

Vasco Da Gama and His Successors 1460 to 1580-K G Jayne 2019-03-30 This book has been considered by academicians and scholars of great significance and value to literature. Kotler On Marketing-Philip Kotler 2012-12-11 Since 1969, Philip Kotler's marketing text books have been read as the marketing gospel, as he has provided incisive and valuable advice on how to create, win and dominate markets. In KOTLER ON MARKETING, he has combined the expertise of his bestselling textbooks and world renowned seminars into this practical all-in-one book, covering everything there is to know about marketing. In a clear, straightforward style, Kotler covers every area of marketing from assessing what customers want and need in order to build brand equity, to creating loyal long-term customers. For business executives everywhere, KOTLER ON MARKETING will become the outstanding work in the field. The secret of Kotler's success is in the readability, clarity, logic and precision of his prose, which derives from his vigorous scientific training in economics, mathematics and the behavioural sciences. Each point and chapter is plotted sequentially to build, block by block, on the strategic foundation and tactical superstructure of the book.

Philosophical Foundations of Labour Law-Hugh Collins 2019-02-12 The first book to explore the philosophical foundations of labour law in detail, including topics such as the meaning of work, the relationship between employee and employer, and the demands of justice in the workplace.

Bilingual First Language Acquisition-Jürgen M. Meisel 1994-09-06 The contributions in this volume are based on an analysis of data from bilingual children acquiring French and German simultaneously. The longitudinal studies started at approximately age one year and six months and continued till age six. The papers focus on the development of specific grammatical phenomena; explanations are given within the framework of the Principle and Parameter approach. The study is primarily concerned with the acquisition of so-called 'functional categories' and the consequences of their acquisition for the development of grammar. Specific points dealt with in these papers include: gender, number and case and their internal structure (DP vs NP); inflection and its consequences for agreement marking; and word order phenomena (subject-raising constructions (incl. passives), word order in subordinate clauses). The basic hypothesis underlying this study is that early child grammars consist only of lexical categories and that functional categories are implemented later in the child's grammar. How this happens exactly is the central issue explored in this book.

Animal Coronaviruses-Leyi Wang 2016-04-12 This detailed volume provides diagnosticians and researchers with practical methodologies and approaches to tackle animal coronaviruses. It explores conventional immunohistochemistry, virus neutralization, enzyme-linked immunosorbent assays, expression and purification of recombinant viral proteins, and various molecular assays, including conventional and real-time reverse transcription-PCR, reverse genetics methodology, and next generation sequencing and sequence analyses. As part of the Springer Protocols Handbooks series, chapters contain readily reproducible laboratory protocols as well as expert tips on troubleshooting and avoiding known pitfalls. Practical and authoritative, Animal Coronaviruses serves as an ideal reference for researchers examining a wide variety of coronavirus species in the Coronaviridae.
