**Studying Mathematics**-Marco Bramanti 2018-07-23 This book is dedicated to preparing prospective college students for the study of mathematics. It can be used at the end of high school or during the first year of college, for personal study or for introductory courses. It aims to set a meeting between two relatives who rarely speak to each other: the Mathematics of Beauty, which shows up in some popular books and films, and the Mathematics of Toil, which is widely known. Toil can be overcome through an appropriate method of work. Beauty will be found in the achievement of a way of thinking. The first part concerns the mathematical language: the expressions "for all", "there exists", "implies", "is false", ...; what is a proof by contradiction; how to use indices, sums, induction. The second part tackles specific difficulties: to study a definition, to understand an idea and apply it, to fix a slightly wrong argument, to discuss suggestions, to explain a proof. The third part presents customary techniques and points of view in college mathematics. The reader can choose one of three difficulty levels (A, B, C).

**Materials Science and Engineering**-William D. Callister 1999-07-27 Bill Callister continues his dedication to student understanding by writing in a clear and concise manner, using terminology that is familiar and not beyond student comprehension. Topics are organized and explained in an approachable manner, so that even instructors who do not have a strong materials background (i.e., those from mechanical, civil, chemical, or electrical engineering, or chemistry departments) can teach from this, already successful, text.

**Discovering Qatar**-Frances Gillespie 2015-10-10 Discovering Qatar evolved from a series of features on the archaeology, natural history and traditional life of Qatar that Frances Gillespie began publishing in a national newspaper in the late 1990s. There was little available on these subjects for the general reader, and many people, especially those involved in education, asked for them to be compiled into a book. The author had no idea at that time what the demand would be, and hoped that, perhaps, a few hundred copies might find a market. Two reprints and 12,000 copies later, the time has come for a thoroughly updated edition of the book, with new and improved illustrations, and including the latest information on such fascinating topics as the whale sharks which congregate

in large numbers in an off-shore oil field, the presence of which had not been noted by scientists when Discovering Qatar was first published in 2006. Research into Qatar's past by teams of archaeologists has made huge progress in the last decade, culminating in the old pearling and trading settlement of Zubara being inscribed as a World Heritage Site in 2013. During the 30 years Frances Gillespie lived in Qatar, the country made a gigantic leap forward in development, with a modern capital to rival any in the region. As a freelance journalist and writer she has the freedom to concentrate on subjects that interest her. Discovering Qatar reflects this, and the author and publisher hope that readers will share her enthusiasm and enjoy learning more about the 'real' Qatar - the Qatar that was there all the time.

**Control of Complex Systems**-Karl J. Aström 2011-06-28 The world of artificial systems is reaching complexity levels that escape human understanding. Surface traffic, electricity distribution, air planes, mobile communications, etc. , are examples that demonstrate that we are running into problems that are beyond classical scientific or engineering knowledge. There is an ongoing world-wide effort to understand these systems and develop models that can capture its behavior. The reason for this work is clear, if our lack of understanding deepens, we will lose our capability to control these systems and make them behave as we want. Researchers from many different fields are trying to understand and develop theories for complex man-made systems. This book presents research from the perspective of control and systems theory. The book has grown out of activities in the research program Control of Complex Systems (COSY). The program has been sponsored by the European Science Foundation (ESF) which for 25 years has been one of the leading players in stimulating scientific research. ESF is a European association of more than 60 leading national science agencies spanning more than 20 countries. ESF covers has standing committees in Medical Sciences, Life and Environmental Sciences, Physical and Engineering Sciences, Humanities and Social Sciences. The COSY program was ESF's first activity in the Engineering Sciences. The program run for a period of five years starting January 1995.

It is based on advances made in nuclear power utilization and computational methods over the past 40 years, covering core design of boiling water reactors and pressurized water reactors, as well as fast reactors and high-temperature gas-cooled reactors. The objectives of this book are to help graduate and advanced undergraduate students to understand core design and analysis, and to serve as a background reference for engineers actively working in light water reactors. Methodologies for core design and analysis, together with physical descriptions, are emphasized. The book also covers coupled thermal hydraulic core calculations, plant dynamics, and safety analysis, allowing readers to understand core design in relation to plant control and safety.

**The IPO Decision**-Jason Draho 2004-01-01 Annotation Initial public offerings (IPOs) garnered unprecedented positive attention in the 1990s for their spectacular returns and central role in entrepreneurial activity. Subsequent revelations of unscrupulous IPO allocation and promotion practices cast a less favorable light.

**Data Acquisition and Processing in Cultural Heritage**-Gabriele Bitelli 2020-03-16 Advances in the knowledge of the tangible components (position, size, shape) and intangible components (identity, habits) of a historic building or site involves fundamental and complex tasks in any project related to the conservation of cultural heritage (CH). In recent years, new geotechnologies have proven their usefulness and added value to the field of cultural heritage (CH) in the tasks of recording, modeling, conserving, and visualizing. In addition, current developments in building information modeling (HBIM), allow integration and simulation of different sources of information, generating a digital twin of any complex CH construction. As a result, experts in the area have increased the number of available sensors and methodologies. However, the quick evolution of geospatial technologies makes it necessary to revise their use, integration, and application in CH. This process is difficult to adopt, due to the new options which are opened for the study, analysis, management, and valorization of CH. Therefore, the aim of the present Special Issue is to cover the latest relevant topics, trends, and best practices in geospatial technologies and processing methodologies for CH sites and scenarios as well as to introduce the new tendencies. This book originates from the Special Issue "Data Acquisition and Processing in Cultural Heritage", focusing primarily on data and sensor integration for CH; documentation/restoration in CH; heritage 3D documentation and modeling of complex CH sites; drone inspections in CH; software development in CH; and

augmented reality in CH. It is hoped that this book will provide the advice and guidance required for any CH professional, making the best possible use of these sensors and methods in CH.

**Mathematical Analysis I**-Claudio Canuto 2015-04-08 The purpose of the volume is to provide a support for a first course in Mathematics. The contents are organised to appeal especially to Engineering, Physics and Computer Science students, all areas in which mathematical tools play a crucial role. Basic notions and methods of differential and integral calculus for functions of one real variable are presented in a manner that elicits critical reading and prompts a hands-on approach to concrete applications. The layout has a specifically-designed modular nature, allowing the instructor to make flexible didactical choices when planning an introductory lecture course. The book may in fact be employed at three levels of depth. At the elementary level the student is supposed to grasp the very essential ideas and familiarise with the corresponding key techniques. Proofs to the main results benefit the intermediate level, together with several remarks and complementary notes enhancing the treatise. The last, and farthest-reaching, level requires the additional study of the material contained in the appendices, which enable the strongly motivated reader to explore further into the subject. Definitions and properties are furnished with substantial examples to stimulate the learning process. Over 350 solved exercises complete the text, at least half of which guide the reader to the solution. This new edition features additional material with the aim of matching the widest range of educational choices for a first course of Mathematics.

**Entropy and Information in Science and Philosophy**-Czechoslovak Academy of Sciences 1975

**Dispatches from the Front**-Stanley Hauerwas 1995 God knows it is hard to make God boring, Stanley Hauerwas writes, but American Christians, aided and abetted by theologians, have accomplished that feat. Whatever might be said about Hauerwas—and there is plenty—no one has ever accused him of being boring, and in this book he delivers another jolt to all those who think that Christian theology is a matter of indifference to our secular society. At once Christian theology and social criticism, this book aims to show that the two cannot be separated. In this spirit, Hauerwas mounts a forceful attack on current sentimentalities about the significance of democracy, the importance of the family, and compassion, which appears here as a literally fatal virtue. In this time of the decline of religious knowledge, when knowing a little about a religion tends to do more harm than good, Hauerwas offers direction to those who would make Christian discourse both useful and truthful. Animated by a deep commitment, his essays exhibit the difference that Christian theology can make in the shaping of lives and the world.

**Coming of Age on Zoloft**-Katherine Sharpe 2012-06-05 A compelling and troubling exploration of a generation raised on antidepressants, and a book that combines expansive interviews with substantive research-based reporting, *Coming of Age on Zoloft* is a vitally important and immediately engrossing study of one of America's most pressing and omnipresent issues: our growing reliance on prescription drugs. Katherine Sharpe, the former editor of *Seed* magazine's ScienceBlogs.com, addresses the questions that millions of young men and women are struggling with. "Where does my personality end and my prescription begin?" "Do I have a disease?" "Can I get better on my own?" Combining stout scientific acumen with first-person experience gained through her own struggle with antidepressants, Sharpe leads the reader through a complex subject, a guide towards a clearer future for all.

**Innovative design and construction technologies**-Ingrid Paoletti 2009

**Educational Technology**-Ronghuai Huang 2019-02-27 The aim of this book is to prepare students with knowledge and skills to understand the organizational needs and requirements of educational technology. Students should be able to use and manage both existing and emerging technologies effectively and be able to apply associated pedagogies to suit the environment, but also evaluate and manage technological advances of future and the requisite pedagogical shifts to achieve efficiency and effectiveness. The demand of educational technology has been rising steadily, primarily due to the fact that e-learning is a huge and significantly expanding

world-wide industry. Commercial e-learning companies, training departments in large companies and organizations, computer software companies and educational institutions the world over employ large numbers of educational technology specialists. There is a strong demand for technologists who understand educational theories and for instructional designers and teachers who understand technologies. This book is targeted towards those who are looking for career in educational technology, instructional design, or media and information systems, or may want to continue their studies in graduate programs in learning and instructional technology, and those who are interested in becoming teacher in K-12 setting but need background in educational technology. This book will also act as a valuable resource in teacher education programs where primary focus on mainstream education and requires an authentic resource in instructional design and educational technology. Keeping in mind the varied needs of the organizations, employees and potential students, this book adopts a competency approach to learning and assessment. The themes and topics take a multi-disciplinary approach, and are aimed at preparing students for competent and innovative educational technology professionals.

**Property Investment Appraisal**-Andrew E. Baum 2021-01-06 Discover an insightful examination of the property investment appraisal process from leaders in the industry This book explains the process of property investment appraisal: the process of estimating both the most likely selling price (market value) and the worth of property investments to individuals or groups of investors (investment value). Valuations are important. They are used as a surrogate for transactions in the measurement of investment performance and they influence investors and other market operators when transacting property. Valuations need to be trusted by their clients and valuers need to produce rational and objective solutions. Appraisals of worth are even more important, as they help to determine the prices that should be paid for assets, even in times of crisis, and they can indicate market under- or over-pricing. In a style that makes the theory as well as the practice of valuation accessible to students and practitioners, the authors provide a valuable critique of conventional valuation methods and argue for the adoption of more contemporary cash-flow methods. They explain how such valuation models are constructed and give useful examples throughout. They also show how these contemporary cash-flow methods connect market valuations with rational appraisals. The UK property investment market has been through periods of both boom and bust since the first edition of this text was produced in 1988. As a result, the book includes examples generated by vastly different market states. Complex reversions, over-rented properties and leaseholds are all fully examined by the authors. This Fourth Edition includes new material throughout, including brand new chapters on development appraisals and bank lending valuations, heavily revised sections on discounted cash flow models with extended examples, and on the measurement and analysis of risk at an individual property asset level. The heart of the book remains the critical examination of market valuation models, which no other book addresses in such detail.

**Introduction to the Theory of Flow Machines**-Albert Betz 2014-05-16 Introduction to the Theory of Flow Machines details the fundamental processes and the relations that have a significant influence in the operating mechanism of flow machines. The book first covers the general consideration in flow machines, such as pressure, stress, and cavitation. In the second chapter, the text deals with ducts; this chapter discusses the general remarks, types of flow, and mixing process. Next, the book tackles the types of cascades, along with its concerns. The closing chapter covers the flow machine and its components, such as turbine, wheels, engines, and propellers. The text will be of great use to mechanical engineers and technicians.

**Transanal Minimally Invasive Surgery (TAMIS) and Transanal Total Mesorectal Excision (taTME)**-Sam Atallah 2019-04-23 This book captures cornerstone developments in a new body of knowledge and provides an expert resource on a "hot topic" in rectal surgery. Transanal minimally invasive surgery (TAMIS) was designed for local excision of select rectal neoplasms, however soon it became realized that the TAMIS technique could be used for applications beyond local excision, most notably for transanal total mesorectal excision (taTME). This new operative technique has revolutionized our approach to the distal rectum by allowing for improved access, especially in obese male patients with an android pelvis, and by minimizing abdominal wall access trauma. The endpoints of improved oncologic resection, as defined by mesorectal envelope completeness, negative circumferential resection margins, and negative distal margin, are assessed. This book details controversies, pitfalls, and future directions of taTME and TAMIS. Chapters are authored by those on the forefront of innovation with TAMIS and taTME, and each is considered an authority on the topic. Transanal Minimally Invasive Surgery

(TAMIS) and Transanal Total Mesorectal Excision (taTME) is a must-have reference for surgeons who are performing this operation and fellows in training who want to completely understand the various nuances of TAMIS and taTME.
